

Aggregate Supply Curve in the Dynamic Model

Pascal Michailat
<https://pascalmichailat.org/w/>

$y^S(\varnothing) = al$ b/c $f(\varnothing) \rightarrow \varnothing$
 $[f(\varnothing) = r \varnothing'^n]$

$y^S(\theta)$ is increasing in θ b/c
 $f(\theta)$ is $\uparrow$ in θ & $x \mapsto \frac{x}{1+x}$ is $\uparrow$ in x
